

Water efficiency

Information on how to use water more efficiency, use less of it, and save money in return.

Ways to save water

- **Monitor your usage:** If you are a metered customer, keep a regular log of the water going through your meter. This will help you to keep an eye on your usage and help notice any leaks.
- **Check your bills:** Make sure you are getting the correct allowances, and that your usage looks right. Contact NI Water with any queries.
- **Regularly check your pipes and fittings:** Check for leaks and ensure your pipes are well insulated against frost. Take note: any leakage from private pipes will be billed to you or your business.
- **Educate staff:** Speak to staff about implementing water efficiency measures. Consider appointing a member of staff to monitor water usage.
- **Know where your supply pipes and shut off valves are:** Shut off water to unused areas of your premises to stop waste from leaks or unmonitored usage.
